Title of Story: An Evening without Electricity

Page 0

It is winter time. It is 7 pm and you are all alone at home. Your parents went to see your grandmother who has been sick over the last few days. You wanted to go and see her, too, but your parents told you to stay at home to study for tomorrow's math test. Luckily you are good at math, so eventually you didn't need much time for your revision. You know that as soon as you finish your studying, you are allowed to play video games for a while. You stay in your room and you start playing your favourite video game. You are doing great, getting one high score after the other, but suddenly, the light goes off and you find yourself in the dark. You are thinking:

- a) The power must be off, it happened also four days ago. I remember my parents said something about a malfunction on the electricity board. I should call my parents.
- b) That's strange; I should sit here and wait.

If you answered a, please move to page 1.

If you answered b, please move to page 2.

Page 1

Calling your parents is the best option, but how can you do that? You have no telephone in your room, nor any other device you can use to contact them. You know that there is a mobile phone, a laptop and a tablet somewhere in the house, but where exactly? It's so difficult to find them now that it's so dark. You are so unlucky that there is no full moon tonight; that would have helped a lot! You can't just sit there, though, you have to do something! You decide to:

- a) Start groping in the dark for any device that will help you to contact your parents. You hope that one of the devices would be left at an obvious and easy to reach place.
- b) You remember that you have a flashlight attached to your school bag, which you use to light your way back from school during winter time when it gets dark really early.

If you answered a, please move to page 5.

If you answered b, please move to page 3.

Page 2

You remain still in your room and wait. It is still dark. Every minute that passes you feel more and more uncomfortable. What if nothing happens and you have to stay alone in the dark for hours? You wait a bit longer and then you decide to:

- a) Head for the window to see if there is someone passing by, in order to ask him/her for help.
- b) You check the light switch again as well as the TV. The power is still out. You remain standing. What should you do? You need to think more and take the right decision.

If you answered a, please move to page 4.

If you answered b, please move to page 5.

Page 3

You switch on the flashlight attached to your school backpack. Now finally you can see your surroundings. Everything seems to be in order, apart from the power. You start searching in the house for the wireless telephone device, your laptop or your mobile phone. Your primary aim now is to reach your parents somehow in order to inform them about the situation. What do you do next?

- a) You find your laptop that still has some battery power left, so that you can send your parents a message through social media or an e-mail.
- b) You remember that you left your mobile in the kitchen to charge. You head to the kitchen using your flashlight.

If you answered a, please move to page 6.

If you answered c, please move to page 10.

Page 4

On your way to the nearest window, you sense that there are many objects in front of you, but you cannot really tell their shape or even their exact position. You think: “My mother is right; I have to be more careful when I play and I should tidy up when I finish”. What do you think next?

- a) You think that there is no reason to worry and you just continue walking towards the nearest window.
- b) You think that walking in the dark is too dangerous. You need a moment to think what would be your next step.

If you answered a, please move to page 9.

If you answered b, please move to page 5.

Page 5

Walking in the dark is not as easy as you initially thought. But still, you have to move forward. Darkness might be scary and the path uncertain, but the window light is not that far; you just have to be careful on your next steps. How do you proceed?

- a) You have seen people with visibility issues using a stick in order not to stumble on objects. You grab a broom stick you find next to you and use it in the same way.

- b) You fall on your knees and start crawling on the floor. This way you avoid hitting on something.

If you answered a, please move to page 6.

If you answered b, please move to page 7.

Page 6

You find your laptop and the wireless telephone device. You take your laptop and start writing a message to your parents. As soon as you finish your message, you press the send button... but nothing happens. You have no internet signal on your laptop, because the power going off affected the router, too. The same applies to your wireless telephone device. When you have no electricity, the wireless telephone device cannot work. Both devices have their own battery, but are dependent for their signal on another source (router, wireless telephone base) that needs electricity to work. What do you do?

- a) You keep searching for your mobile phone.
- b) You are disappointed that nothing works and you start thinking that you should better remain still and wait.

If you answered a, please move to page 10.

If you answered b, please move to page 7.

Page 7

You are still in the dark, but you realize that, although the moonlight that enters from the window is thin, after being so long in the dark your eyes have adjusted a little. On a small table next to you, you spot your father's watch. The numbers are made from a radio luminescence material that produces a small amount of light. You also detect a key holder on the kitchen table; attached on it is a LED light that is far more powerful than your father's watch. What do you do next?

- a) You stand up and start running to the kitchen table thinking that this is finally your chance to get some light.
- b) You take you father's watch thinking that this is a good first step, but your goal remains to find a communication device.

If you answered a, please move to page 9.

If you answered b, please move to page 8.

Page 8

With your father's watch in one hand and the broom stick on the other, you manage to reach the window. You take a look outside; you are able to see the back yard, but your whole neighborhood is immersed in the dark. You feel more comfortable now. You hear a sound and you look carefully at the opposite corner of the back yard.

- a) You think that those are the shades of your parents, so you rush to the door to welcome them. This is the best thing that happened to you after the power went off. You feel eager to tell them all the challenges you went through.

- b) You think that those are the shades of your parents, so you consider that the gear you have collected will be useful to them as well. As you turn your head to the other side of the room, you detect your mobile phone and slowly walk towards it, so that you can get it to inform your parents about the situation inside the house.

If you answered a, please move to page 9.

If you answered b, please move to page 10.

Page 9

You continue walking towards your target. You start to stumble on furniture and toys that you had left on the floor. Suddenly you slip and fall. You feel an acute pain! You think that you must have twisted your ankle. Thankfully, at that moment you hear your parents' keys on the door. They are back home and they find you on the floor. The pain on your ankle is intense, but now at least you feel safe! You know that your parents will find a way to solve the electricity problem.

The end

Page 10

You take your mobile phone. Fortunately, the battery had charged a bit before the power went off. Your mobile is independent from any other device, so you are able to call your parents to warn them about the lights being off. You dial the number and you hear the voice of your parents comforting you. You say that you can use your mobile phone flashlight to walk outside to hand them your gear, but they say that they already have a flashlight and will enter the house in a moment. You feel relieved and pleased that you won't be in the dark alone anymore.

The end
