

4th Press Release

Learning Activity Week for EnterSchoolMind, Entrepreneurship in Higher Education, in London, UK

Monday, 17 -21 February 2020

On Monday, 17 February 2020, the Learning Activity Week for the Enterschoolmind project began. MMC trainers implemented the learning activities that all partners had designed in order to foster entrepreneurial mindset in schools, through primary school teachers' training in 7 key competences. MMC trainers and learning facilitators trained Greek, Cypriot, and English primary school teachers in its newly developed curricula and materials. The Learning Activity Week was hosted by 15 Billions from London, UK.

On the first day of the Learning Activity Week, the overall course of the project and the results of the learning activities that took place were presented and necessary clarifications were made. Partners reviewed the learning outcomes and the curricula that would be used to finalise the project materials (i.e. those that are more relevant to primary school teachers) for the evaluation and the certification of the primary school teachers. Afterwards, partners were briefed on the certification procedures for the material and the persons involved in the project. Amendments on the material were argued and the first day was completed with assessment of the presented materials and recommendations for their improvement by the participants. The same procedure was followed for all the days of the Learning Activity Week.

On the last day, partners reviewed all material and discussed what had been designed by each of them and would be used to educate teachers on entrepreneurship.

Cultivate school entrepreneurial mindset through
holistic approach targeting teachers and pupils

Issues related to quality assurance and the certification scheme were to be discussed on the 3rd Transnational Meeting, which would take place the following days. The meeting's aim was not only the evaluation of the material, but also to conclude on the final improvements that should be done. Also, for partners to decide the dates and setting up the plan for subsequent actions.

The EnterSchoolMind project is funded with the support of the European Commission.
